Each hash is a tamper-evident SHA-256 content hash, not a digital signature.

Portfolio risk — Phase 3 item 12

Weighting	Positions	Top weight	Effective positions	Annual volatility	1-day 95% VaR	Average correlation
Equal weight (quantity/weight incomplete)	3	33.3%	3.0	28.3%	2.93%	0.29

Position risk contribution

Symbol	Weight	Standalone vol	Marginal risk	Component risk	Risk share	95% VaR share
SIL.BO	33.3%	42.3%	37.0%	12.3%	43.6%	1.28%
SIL.NS	33.3%	37.8%	33.5%	11.2%	39.5%	1.16%
KNSL	33.3%	35.4%	14.4%	4.8%	16.9%	0.50%

Weighted standalone volatility: 38.5% • Portfolio volatility: 28.3% • Diversification benefit: 10.2%

Sector / market exposure	Weight
Consumer Cyclical	66.7%
Financial Services	33.3%
Market: US	33.3%
Market: BSE	33.3%
Market: NSE	33.3%
Sector risk: Consumer Cyclical	83.1%
Sector risk: Financial Services	16.9%

Illustrative stress scenario	Portfolio change
Broad correction	-10.0%
Bear market	-20.0%
Severe market stress	-35.0%
Risk-adjusted portfolio stress	-24.5%

- Cross-currency volatility and VaR use local-currency returns and exclude FX movements; review currency risk separately.
- Largest position is 33.3%; single-stock concentration is high.
- Consumer Cyclical represents 66.7% of the portfolio.
- KNSL weight 33.3% exceeds the app's risk-based 12% screening guideline.
- SIL.BO weight 33.3% exceeds the app's risk-based 8% screening guideline.
- SIL.NS weight 33.3% exceeds the app's risk-based 8% screening guideline.
- Effective diversification is only 3.0 equally weighted positions.

Scores: R = financial risk, DQ = data quality, BQ = business quality, G = governance risk, C = confidence. Method: Up to five annual observations are normalized; a ten-year two-stage DCF or residual-income model is blended with Graham/book value and live same-country peer medians using sector-specific weights. The required margin of safety rises with financial risk, incomplete data, cyclicality, and model disagreement. Monte Carlo percentiles and portfolio stress statistics are model outputs, not return forecasts. Values use native currency and are estimates, not forecasts.

Important: For education and research only—not investment advice or a recommendation. No valuation makes investing safe. Free Yahoo/Screener/NSE/BSE data can be delayed, incomplete, rate-limited, or unavailable. Verify all figures against official filings and consult an appropriately registered financial professional.
