Fair Value Analysis

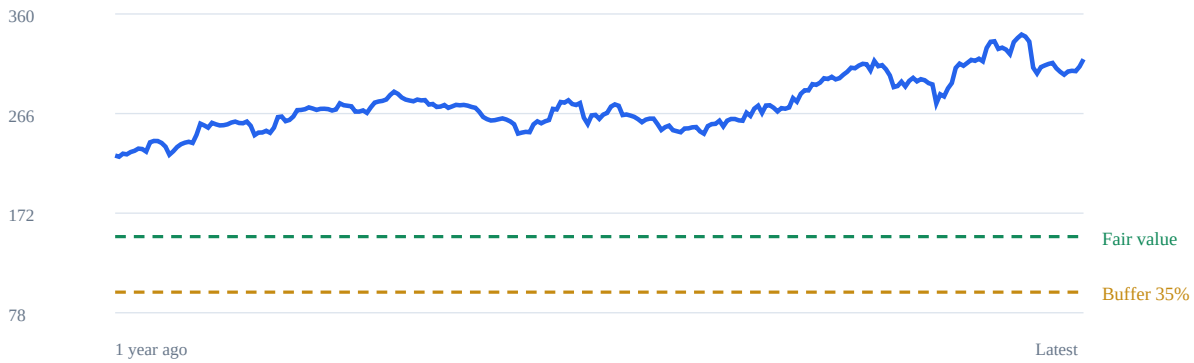

Apple Inc. (AAPL) • US • Generated 20 Aug 2026, 08:26

Executive summary

MARKET PRICE	BASE FAIR VALUE	UPSIDE / DOWNSIDE	35% BUFFER PRICE
USD 316.83	USD 149.58	-52.8%	USD 97.23

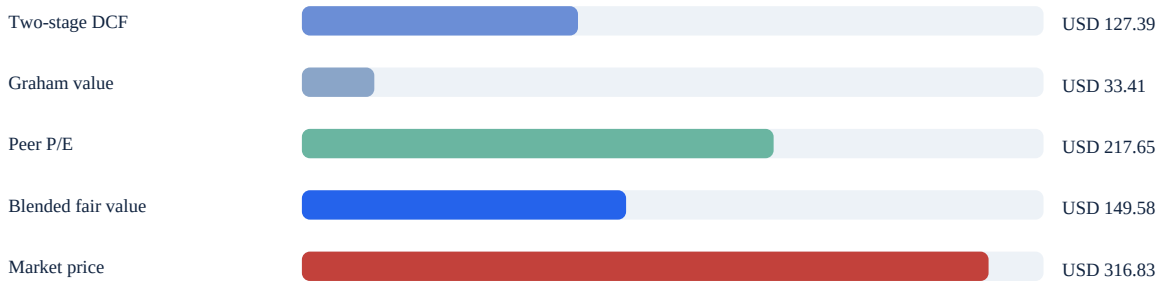

Assessment: **Above estimated fair value** | Model coverage: **Moderate**

Price vs valuation

The historical line is market price; fair value and the valuation-buffer line are today's model references, not historical estimates.

Base model comparison

Scenario valuation

Scenario	Growth	Discount	Terminal	Two-stage DCF	Graham value	Peer P/E	Blended
Conservative	4.2%	12.0%	1.0%	USD 77.11	USD 33.41	USD 217.65	USD 121.93
Base	8.2%	10.0%	2.0%	USD 127.39	USD 33.41	USD 217.65	USD 149.58
Optimistic	12.2%	8.5%	3.2%	USD 234.10	USD 33.41	USD 217.65	USD 208.27

Company & market snapshot

Sector	Technology	**Industry**	Consumer Electronics
Market cap	USD 4,623,874,129,920.00	**Trailing P/E**	35.60
52-week range	USD 223.78 – USD 344.57	**Price / book**	43.05
Normalized EPS	USD 6.74	**Book value / share**	USD 7.36
Normalized FCF	USD 104,195,500,000.00	**Peer median**	32.28× P/E

Method and assumptions

Profile selected: Technology operating company. The engine uses up to five annual observations for normalized inputs, a ten-year two-stage DCF (or residual income for financial institutions), Graham/book value, and live same-country peer medians. Sector-aware weights are 55%, 10%, and 35%. Missing methods are omitted and remaining weights are re-normalized. Scenarios are estimates, not price forecasts.

Valuation profile	Technology operating company
Forecast period	10 years; growth fades after year 5
Base growth	8.2%
Base discount rate	10.0%
Base terminal growth	2.0%
Minimum / required buffer	25% / 35%
Financial risk score	25/100 (lower is better)
Data quality score	100/100
Live peers	NVDA, MSFT, TSM, AVGO, SKHY, MU, AMD, ASML
Data source	Yahoo Finance • AAPL
Source updated	2026-08-19
Sources checked	Yahoo Finance
Cache delivery	fresh cache • age 1.7h
Data retrieved	2026-08-20 06:41 UTC

Assumption review & override disclosure

Preset: **Conservative overlay** • 4 manual override(s)

Assumption	Automatic	Reviewed	Difference
Base growth	10.2%	8.2%	-2.0 pp
Discount rate	9.0%	10.0%	+1.0 pp
Terminal growth	2.5%	2.0%	-0.5 pp
Minimum valuation buffer	20.0%	25.0%	+5.0 pp

Reviewer note: Use a higher required return and valuation buffer for a conservative review.

Risk, resilience and confidence analytics

Business quality	100/100 (higher is better)	**Governance risk**	27/100 (lower is better)
Confidence	74/100 — Moderate	**Model dispersion**	144.6%

Reverse DCF	25.5% implied initial growth	**Required valuation buffer**	35%

Resilience bars invert financial/governance risk so longer green bars indicate stronger modeled resilience. They do not guarantee protection from loss.
The market price implies approximately 25.5% annual initial growth for five years, fading thereafter.

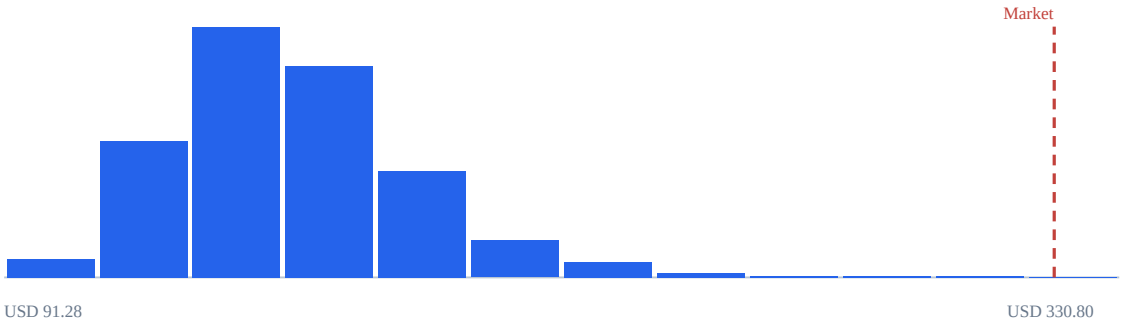

Fair-value sensitivity

Discount \ Terminal	1.0%	1.5%	2.0%	2.5%	3.0%
8.0%	USD 164.27	USD 168.99	USD 174.49	USD 181.00	USD 188.80
9.0%	USD 152.98	USD 156.37	USD 160.24	USD 164.71	USD 169.92
10.0%	USD 144.23	USD 146.75	**USD 149.58**	USD 152.79	USD 156.46
11.0%	USD 137.26	USD 139.18	USD 141.32	USD 143.71	USD 146.39
12.0%	USD 131.58	USD 133.08	USD 134.73	USD 136.55	USD 138.58

Green: above market price • Amber: near market price • Red: below market price • Bold: base assumptions

Monte Carlo valuation — Phase 3 item 11

P10	P25	Median	P75	P90	Probability FV > price	Simulations
USD 122.80	**USD 134.76**	**USD 150.01**	**USD 167.42**	**USD 185.79**	**0.1%**	**2,000**

Simulation varies normalized financial inputs, initial growth, discount rate, terminal growth, and peer multiples. Percentiles describe model uncertainty—not expected returns or the probability of making a profit.

Interpretation, limitations & risks

• Fair value is highly sensitive to growth, discount-rate, terminal-growth, and normalized earnings assumptions.

• Free Yahoo/Screener/NSE/BSE website data can be delayed, incomplete, restated, rate-limited, blocked, or unavailable; verify figures against company filings.

• Banks, insurers, REITs, cyclical firms, loss-making firms, and businesses with unusual capital structures may require specialized models.

• Live peers are screened through free Yahoo Finance region, industry/sector, and market-cap filters; they may still differ in growth, leverage, accounting, or business mix.

• Currency is native to the listing. This report does not fully model governance, taxes, FX, liquidity, or portfolio concentration.

• Current ratio below 1 (0.89).

• Estimated ROIC (104.3%) comfortably exceeds the required return.

• Receivables have grown materially faster than revenue.

• Free Yahoo Finance data may be delayed, incomplete, rate-limited, or changed without notice. Verify official filings.

• Loaded from fresh local cache (1.7 hours old).

• Cash flow and earnings inputs use up to five annual observations and median normalization when available.

• Available model weights are automatically re-normalized when a model cannot be calculated.

• Dynamic valuation buffer is 35% versus the 25% minimum after financial, quality, governance, data, sector, and model-disagreement adjustments. This buffer does not guarantee protection from loss.
