## Portfolio risk — Phase 3 item 12

| Weighting | Positions | Top weight | Effective positions | Annual volatility | 1-day 95% VaR | Average correlation |
|---|---|---|---|---|---|---|
| Imported target weights | 3 | 35.0% | 3.0 | 14.5% | 1.50% | 0.16 |

## Position risk contribution

| Symbol | Weight | Standalone vol | Marginal risk | Component risk | Risk share | 95% VaR share |
|---|---|---|---|---|---|---|
| HDFCBANK.NS | 35.0% | 20.8% | 15.6% | 5.5% | 37.6% | 0.57% |
| RELIANCE.NS | 35.0% | 20.2% | 13.9% | 4.9% | 33.6% | 0.51% |
| AAPL | 30.0% | 25.0% | 13.9% | 4.2% | 28.7% | 0.43% |

Weighted standalone volatility: 21.8% • Portfolio volatility: 14.5% • Diversification benefit: 7.3%

| Sector / market exposure | Weight |
|---|---|
| Energy | 35.0% |
| Financial Services | 35.0% |
| Technology | 30.0% |
| Market: NSE | 70.0% |
| Market: US | 30.0% |
| Sector risk: Financial Services | 37.6% |
| Sector risk: Energy | 33.6% |
| Sector risk: Technology | 28.7% |

| Illustrative stress scenario | Portfolio change |
|---|---|
| Broad correction | -10.0% |
| Bear market | -20.0% |
| Severe market stress | -35.0% |
| Risk-adjusted portfolio stress | -23.5% |

- Cross-currency volatility and VaR use local-currency returns and exclude FX movements; review currency risk separately.
- Largest position is 35.0%; single-stock concentration is high.
- AAPL weight 30.0% exceeds the app's risk-based 12% screening guideline.
- RELIANCE.NS weight 35.0% exceeds the app's risk-based 10% screening guideline.
- HDFCBANK.NS weight 35.0% exceeds the app's risk-based 12% screening guideline.
- Effective diversification is only 3.0 equally weighted positions.

Scores: R = financial risk, DQ = data quality, BQ = business quality, G = governance risk, C = confidence. Method: Up to five annual observations are normalized; a ten-year two-stage DCF or residual-income model is blended with Graham/book value and live same-country peer medians using sector-specific weights. The required margin of safety rises with financial risk, incomplete data, cyclicality, and model disagreement. Monte Carlo percentiles and portfolio stress statistics are model outputs, not return forecasts. Values use native currency and are estimates, not forecasts.

Important: For education and research only—not investment advice or a recommendation. No valuation makes investing safe. Free Yahoo/Screener/NSE/BSE data can be delayed, incomplete, rate-limited, or unavailable. Verify all figures against official filings and consult an appropriately registered financial professional.
