Fair Value Analysis

Standard Industries Limited (SIL.BO) • BSE • Generated 20 Aug 2026, 07:40

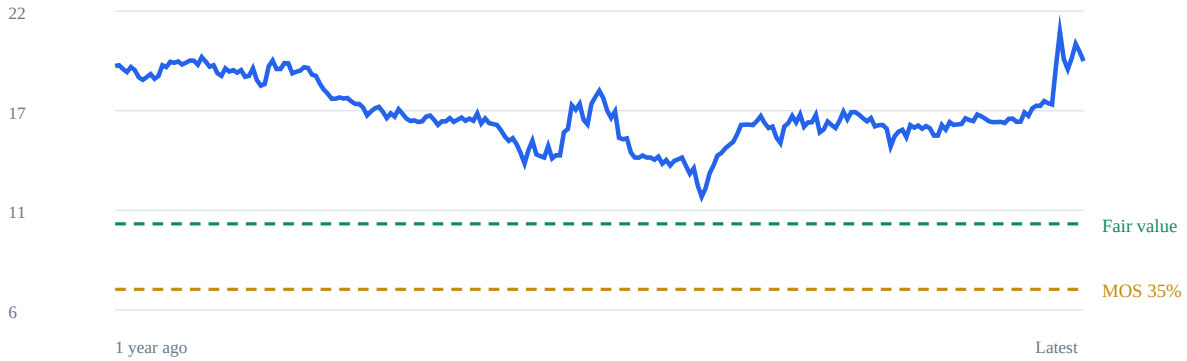

Executive summary

MARKET PRICE	BASE FAIR VALUE	UPSIDE / DOWNSIDE	35% MOS PRICE
INR 19.30	INR 10.34	-46.4%	INR 6.72

Assessment: **Fallback valuation — high uncertainty • Above estimated fair value** | Model coverage: **Low**

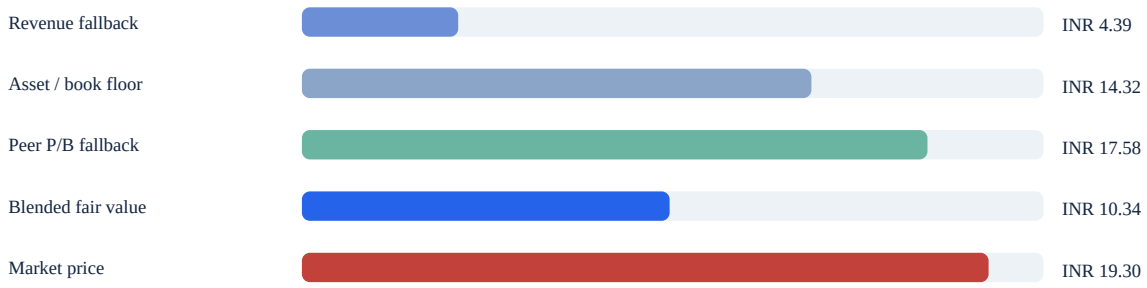

LOW-CONFIDENCE FALLBACK: Positive normalized FCF was unavailable; a bounded sector revenue multiple was used. Positive EPS was unavailable; a conservative positive book-value or net-cash floor was used. Peer P/E was unusable; peer P/B was applied to positive book value. The result uses a minimum 35% safety margin and must not be treated as equivalent to a positive-earnings/FCF valuation.

Price vs valuation

The historical line is market price; fair value and MOS are today's model references, not historical estimates.

Base model comparison

Scenario valuation

Scenario	Growth	Discount	Terminal	Revenue fallback	Asset / book floor	Peer P/B fallback	Blended
Conservative	13.5%	14.9%	4.0%	INR 4.17	INR 14.32	INR 17.58	INR 10.22
Base	17.5%	12.9%	5.0%	INR 4.39	INR 14.32	INR 17.58	INR 10.34

Scenario	Growth	Discount	Terminal	Revenue fallback	Asset / book floor	Peer P/B fallback	Blended
Optimistic	21.5%	11.4%	6.2%	INR 4.60	INR 14.32	INR 17.58	INR 10.44

Company & market snapshot

Sector	Consumer Cyclical	**Industry**	Textile Manufacturing
Market cap	INR 1,240,000,000.00	**Trailing P/E**	2.00
52-week range	INR 11.70 – INR 22.80	**Price / book**	1.08
Normalized EPS	INR -1.06	**Book value / share**	INR 17.90
Normalized FCF	INR -104,685,500.00	**Peer median**	21.13× P/E

Method and assumptions

Profile selected: Standard operating company. The engine uses up to five annual observations for normalized inputs, a ten-year two-stage DCF (or residual income for financial institutions), Graham/book value, and live same-country peer medians. Sector-aware weights are 50%, 20%, and 30%. Missing methods are omitted and remaining weights are re-normalized. Scenarios are estimates, not price forecasts.

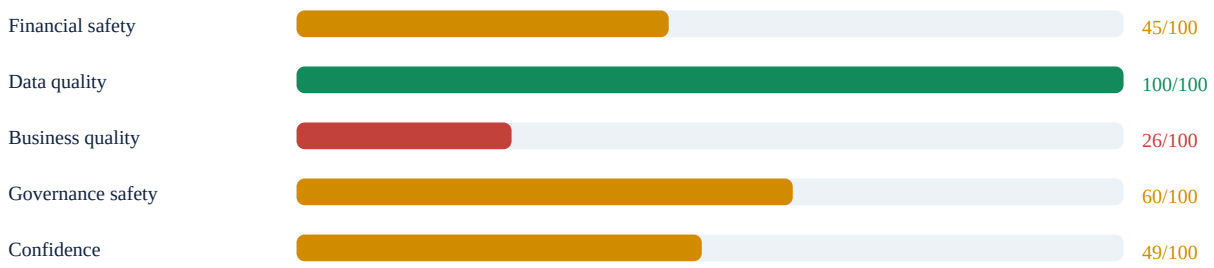

Valuation profile	Standard operating company
Forecast period	10 years; growth fades after year 5
Base growth	17.5%
Base discount rate	12.9%
Base terminal growth	5.0%
Minimum / required MOS	20% / 35%
Financial risk score	55/100 (lower is better)
Data quality score	100/100
Live peers	MVGJL.BO, BIZOTIC.BO, CHEVIOT.BO, SUMEETINDS.BO, DANLAW.BO, SPECIALITY.NS, GLOS
Data source	Yahoo Finance + Screener.in + BSE India • SIL.BO
Source updated	2026-08-20
Sources checked	Yahoo Finance, Screener.in, BSE India
Cache delivery	Network retrieval
Data retrieved	2026-08-20 07:40 UTC

Assumption review & override disclosure

Automatic defaults were used without manual overrides.

Phase-2 safety and confidence analytics

Business quality	26/100 (higher is better)	**Governance risk**	40/100 (lower is better)
Confidence	49/100 — Low	**Model dispersion**	92.1%
Reverse DCF	Unavailable	**Required MOS**	35%

Safety scores invert financial/governance risk so longer green bars are better.
Reverse valuation unavailable because the primary model lacks required positive inputs.

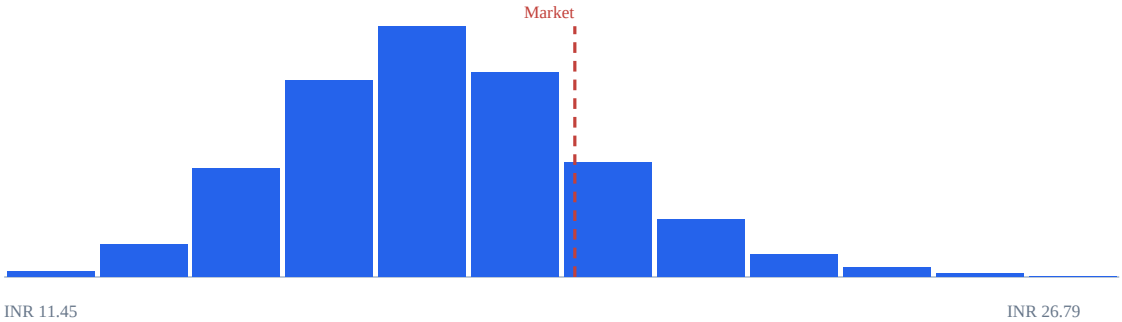

Fair-value sensitivity

Discount \ Terminal	4.0%	4.5%	5.0%	5.5%	6.0%
10.9%	INR 17.58	INR 17.58	INR 17.58	INR 17.58	INR 17.58
11.9%	INR 17.58	INR 17.58	INR 17.58	INR 17.58	INR 17.58
12.9%	INR 17.58	INR 17.58	**INR 17.58**	INR 17.58	INR 17.58
13.9%	INR 17.58	INR 17.58	INR 17.58	INR 17.58	INR 17.58
14.9%	INR 17.58	INR 17.58	INR 17.58	INR 17.58	INR 17.58

Green: above market price • Amber: near market price • Red: below market price • Bold: base assumptions

Monte Carlo valuation — Phase 3 item 11

P10	P25	Median	P75	P90	Probability FV > price	Simulations
INR 14.89	**INR 16.07**	**INR 17.40**	**INR 18.83**	**INR 20.32**	**18.7%**	**2,000**

Simulation varies normalized financial inputs, initial growth, discount rate, terminal growth, and peer multiples. Percentiles describe model uncertainty—not expected returns or the probability of making a profit.

Interpretation, limitations & risks

• Fair value is highly sensitive to growth, discount-rate, terminal-growth, and normalized earnings assumptions.

• Free Yahoo/Screener/NSE/BSE website data can be delayed, incomplete, restated, rate-limited, blocked, or unavailable; verify figures against company filings.

• Banks, insurers, REITs, cyclical firms, loss-making firms, and businesses with unusual capital structures may require specialized models.

• Live peers are screened through free Yahoo Finance region, industry/sector, and market-cap filters; they may still differ in growth, leverage, accounting, or business mix.

• Currency is native to the listing. This report does not fully model governance, taxes, FX, liquidity, or portfolio concentration.

• Weak interest coverage (-22.0×).

• Free cash flow was non-positive in 4 reported years.

• Estimated ROIC (-15.7%) is below the required return.

• Return on equity is low (-16.6%).

• Free cash flow was positive in fewer than half of reported years.

• Inventory has grown materially faster than revenue.

• Provider governance ratings were unavailable; auditor, board, and related-party review remains manual.

• Promoter pledging, related-party transactions, auditor qualifications, and contingent liabilities must be checked in NSE/BSE filings.

• Free Yahoo Finance data may be delayed, incomplete, rate-limited, or changed without notice. Verify official filings.

• Cash flow and earnings inputs use up to five annual observations and median normalization when available.

• Positive normalized FCF was unavailable; a bounded sector revenue multiple was used.

• Positive EPS was unavailable; a conservative positive book-value or net-cash floor was used.

• Peer P/E was unusable; peer P/B was applied to positive book value.

• Fallback valuation is a low-confidence heuristic, not a substitute for normalized earnings or cash-flow analysis.

• Available model weights are automatically re-normalized when a model cannot be calculated.

• Dynamic margin of safety is 35% versus the 20% minimum after financial, quality, governance, data, sector, and model-disagreement adjustments.
